

Paper: 1MA1/2H				
Question	Answer	Mark	Mark scheme	Additional guidance
12	$6x^3 + x^2 - 20x - 12$	M1	for method to find the product of any two linear expressions (3 out of no more than 4 terms correct with correct signs or 4 correct terms ignoring signs), eg. $6x^2 + 9x + 4x + 6$ or $3x^2 + 2x - 6x - 4$ or $2x^2 + 3x - 4x - 6$	Note that, for example, $6x^2 + 13x$ or $13x + 6$ are regarded as three terms in the expansion of $(x - 2)(3x + 2)$
		M1	for method of multiplying out remaining products, half of which are correct (ft their first product), eg. $6x^3 + 13x^2 - 12x^2 + 6x - 26x - 12$	First product must be quadratic but need not be simplified or may be simplified incorrectly.
		A1	cao

Original wording

Note that, for example, $6x^2 + 13x$ or $13x + 6$ are regarded as three terms in the expansion of $(x - 2)(3x + 2)$

Correction / interpretation

In this additional-guidance sentence, read $(3x + 2)(2x + 3)$ in place of $(x - 2)(3x + 2)$.

Reason

The original sentence is reproduced with its mathematical notation represented in printable ASCII. Its examples use terms from $(3x + 2)(2x + 3) = 6x^2 + 9x + 4x + 6 = 6x^2 + 13x + 6$. Each example retains three of the four original products after combining the two linear terms. In contrast, $(x - 2)(3x + 2) = 3x^2 - 4x - 4$. This clarification corrects only the bracket-pair reference; the answer, M1,
