Question	Answer	Mark	Mark scheme	Additional guidance
13 (a)	Explanations	C1	for a correct explanation, eg she has labelled the wrong angle	Any incorrect statement as part of a correct response can be ignored unless it contradicts the statement,
		C1	for a second correct explanation, eg she has labelled the equal sides incorrectly with parallel line notation	Any incorrect statement as part of a correct response can be ignored unless it contradicts the statement.
(b)	141 with reasoning	M1	for complete method to find angle x eg $360 - 43 - 88 - 88$ (=141) **OR** $\frac{1}{2}x + 88 + 21.5$ (=180) **and** $\frac{1}{2}x$ (=70.5)	May be shown on diagram if no ambiguity or contradiction
		A1	for $x = 141$	
		C1	(dep on M1) for Angles in a quadrilateral add up to 360 **OR** Angles in a triangle add up to 180 **and** there is one line of symmetry	Underlined words need to be shown Accept "4-sided shape"
