

Paper: 1MA1/3H				
Question	Answer	Mark	Mark scheme	Additional guidance
13	1.01	P1	for $1.09 \times 60 (= 65.4 \text{ or } \frac{327}{5})$ or $0.97 \times 128 (= 124.16 \text{ or } \frac{3104}{25})$	Note that the volumes may be converted to ml, eg $1.09 \times 60000 (= 65400)$ Candidates working in ml must use 188,000 If an answer within the range is seen in working but then rounded incorrectly award full marks. Accept 1 for 1.00 Note that the correct value is 1.008.....
		P1	for $1.09 \times 60 (= 65.4 \text{ or } \frac{327}{5})$ and $0.97 \times 128 (= 124.16 \text{ or } \frac{3104}{25})$ or “65.4” + “124.16” $(= 189.56 \text{ or } \frac{4739}{25})$	
		P1	for a complete process to find the density of antifreeze eg (“65.4” + “124.16”) $\div 188$ or $189.56 \div 188$ or $\frac{4739}{25} \div 188$	
		A1	for answer in the range 1.00 to 1.01
