

- 2** All the marks on the mark scheme are designed to be awarded; mark schemes should be applied positively. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme. If there is a wrong answer (or no answer) indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

Questions where working is not required: In general, the correct answer should be given full marks.

Questions that specifically require working: In general, candidates who do not show working on this type of question will get no marks – full details will be given in the mark scheme for each individual question.

3 **Crossed out work**

This should be marked **unless** the candidate has replaced it with an alternative response.

4 **Choice of method**

If there is a choice of methods shown, mark the method that leads to the answer given on the answer line.

If no answer appears on the answer line, mark both methods **then award the lower number of marks.**

5 **Incorrect method**

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks. Send the response to review for your Team Leader to check.

6 **Follow through marks**

Follow through marks which involve a single stage calculation can be awarded without working as you can check the answer, but if ambiguous do not award.

Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

7 Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question or its context. (eg. an incorrectly cancelled fraction when the unsimplified fraction would gain full marks).

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect (eg incorrect algebraic simplification).

11 Number in brackets after a calculation

Where there is a number in brackets after a calculation eg $2 \times 6 (=12)$ then the mark can be awarded **either** for the correct method, implied by the calculation **or** for the correct answer to the calculation.

12 Use of inverted commas

Some numbers in the mark scheme will appear inside inverted commas eg "12" $\times 50$; the number in inverted commas cannot be any number – it must come from a correct method or process but the candidate may make an arithmetic error in their working.

Guidance on the use of abbreviations within this mark scheme

M method mark awarded for a correct method or partial method

A accuracy mark (awarded after a correct method or process; if no method or process is seen then full marks for the question are implied but see individual mark schemes for more details)

oe or equivalent

cao correct answer only

isw ignore subsequent working

Paper: 1MA1/2H					
Question		Answer	Mark	Mark scheme	Additional guidance
8	(a)	580	M1	for method to find value before increase eg $551 \div 0.95$	
			A1	cao	
	(b)	6354.67	M1	for 6000×1.024 oe (= 6144)	
			M1	for “6144” $\times 1.017^2$ oe	
			A1	for 6354.66 or 6354.67 or 6354.68	
				$6000 \times 1.024 \times 1.017^2$ scores M2 If correct answer is stated then subsequently rounded isw and award 3 marks If correct answer stated and then interest only given as the answer award M2A0	

Documented scheme clarification

Original source

scheme page 9, SHA256 758ff38878f36ee68f16bf5691a6dd9c2bbb7ec412e2f074d89bf98c2657ce53

Original wording

for method to find value before increase eg $551 / 0.95$

Correction / interpretation

Read 'before increase' as 'before discount/decrease'. The normal price is $551 / 0.95 = 580$.

Reason

Question 8(a) specifies a 5% discount, so 551 is 95% of the normal price. The source calculation and answer are correct; only the word 'increase' is incorrect.
