16 Here are two rectangles.

Jim says,

"The two rectangles are similar because $8 + 4 = 12$ and $6 + 4 = 10$"

Is Jim correct?
Explain your answer.

No. The multiplier from 8 to 12 is 12 ÷ 8 = 1.5.

But 6 × 1.5 = 9, not 10. Corresponding sides need the same multiplier.

1 mark
Explain using a multiplicative scale factor

(Total for Question 16 is 1 mark)
