14 Here is a 4-sided spinner.

The table shows the probabilities that when the spinner is spun it will land on 1, on 3 and on 4

Number	1	2	3	4
Probability	0.2	0.3	0.4	0.1

The spinner is spun once.

(a) Work out the probability that the spinner will land on 2

$P(2) = 1 - (0.2 + 0.4 + 0.1) = 0.3$

1 mark
Probabilities sum to 1

0.3

(1)

(b) Which number is the spinner least likely to land on?

The smallest probability is 0.1, for number 4.

1 mark
Give the number, not its probability

4

(1)

Jake is going to spin the spinner 60 times.

(c) Work out an estimate for the number of times the spinner will land on 1

Expected number = $0.2 \times 60 = 12$

1 mark
Multiply probability by trials

1 mark
Estimated number of times

12

(2)

(Total for Question 14 is 4 marks)
