**19** (a) On the number line, show the inequality $x < 4$

**2 marks total**
Open circle at 4 and arrow to the left
4 is excluded; all smaller values are included

**(2)**

$3 < y \leqslant 7$ where $y$ is an integer.

(b) Write down all the possible values of $y$.

Greater than 3, and up to and including 7.

**2 marks total**
All four integers, with no extra values

4, 5, 6, 7

**(2)**

(c) Solve $3x + 5 \geqslant x + 17$

$3x + 5 \geq x + 17$
(−x) (−x)
$2x + 5 \geq 17$
(−5) (−5)
$2x \geq 12$
(÷2) (÷2)
$x \geq 6$

**1 mark**
Subtract x from both sides

**1 mark**
Subtract 5, then divide by 2

**1 mark**
Correct inequality

Dividing by positive 2 keeps the inequality sign.

$x \geq 6$

**(3)**

**(Total for Question 19 is 7 marks)**
