Question	Answer	Mark	Mark scheme	Additional guidance
14	$-48x^3 + 180x^2 - 108x - 105$	M1	for method to find the product of any two linear expressions (3 correct terms out of 4 terms or 4 terms ignoring signs) eg $12x^2 - 30x + 6x - 15$ **or** $42x - 24x^2 + 21 - 12x$ **or** $14x - 8x^2 - 35 + 20x$ **or** $3(4x^2 - 10x + 2x - 5)$	Note that, for example, $-24x - 15$ in expansion of $(6x + 3)(2x - 5)$ is to be regarded as 3 correct terms
		M1	for a complete method to obtain all terms, at least half of which are correct (at least 4 out of 8 terms or at least 3 out of 6 terms), (ft their first product), eg $84x^2 - 48x^3 - 168x + 96x^2 - 105 + 60x$	First product must be quadratic with at least 3 terms but need not be simplified or may be simplified incorrectly.
		A1	for $-48x^3 + 180x^2 - 108x - 105$ oe eg $3(-16x^3 + 60x^2 - 36x - 35)$
