17 At a height of n metres above sea level, the atmospheric pressure is P_n millibars.
At a height of $(n + 1000)$ metres above sea level, the atmospheric pressure is $P_{(n + 1000)}$ millibars

where $P_{(n + 1000)} = 0.88 P_n$

At sea level, the atmospheric pressure is 1013 millibars.

Calculate the atmospheric pressure at a height of 3000 metres above sea level.
Give your answer correct to 3 significant figures.

..... millibars

(Total for Question 17 is 3 marks)
