8 Sam says,

"When a number in the 5 times table is multiplied by 5, you always get a number that ends in 5"

(a) Write down an example to show that Sam is wrong.

.....

(1)

Jo says,

"Because 3 and 13 are both prime numbers, all whole numbers that end in 3 are prime numbers."

(b) Is Jo correct?
Give a reason with your answer.
