| Question | Working | Answer | Mark | Notes |
|---|---|---|---|---|
| 7 | | shown | M1 | for (angle *BCA*) = 180 – 117 (= 63) |
| | | | M1 | for (angle *CAB*) = 180 – "63" – 54 (= 63) or (angle *CAB*) = 117 – 54 (= 63) |
| | | | C2 | for statement, eg. isosceles since angle *BCA* = angle *CAB* = 63 with fully correct reasons,<br>from: angles on a straight line add up to 180º<br>angles in a triangle add up to 180º<br>exterior angle of a triangle is equal to sum of interior opposite angles |
| | | | [C1 | for angle *BCA* = 63 and angle *CAB* = 63 and one of the above reasons] |
| | | | | OR |
| | | | M1 | for $\frac{(180-54)}{2}$ (= 63) |
| | | | M1 | for identification of **two** angles in triangle *ABC* being "63" |
| | | | C2 | for statement, eg. isosceles since angle *BCA* = angle *CAB* = 63 **and** angles on a straight line add up to 180º **and** fully correct reasons:<br>base angles of an isosceles triangle are equal<br>and angles in a triangle add up to 180º |
| | | | [C1 | for angle *BCA* = 63 and angle *CAB* = 63 and one reason<br>from: base angles of an isosceles triangle are equal<br>angles in a triangle add up to 180º] |
