4 A container is in the shape of a cuboid.

The container is $\frac{2}{3}$ full of water.

A cup holds 275 m*l* of water.

What is the greatest number of cups that can be completely filled with water from the container?

Full volume = 30 × 6 × 19 = 3420 cm³

1 mark
Find cuboid volume.

Water = 2/3 × 3420 = 2280 cm³

1 mark
Take two thirds.

1 cm³ = 1 ml, so water = 2280 ml.

2280 ÷ 275 = 8 remainder 80

1 mark
Divide by 275 ml.

8 cups use 2200 ml; 9 need 2475 ml.

1 mark
Greatest whole number: 8.

8

(Total for Question 4 is 4 marks)
