Question	Answer	Mark	Mark scheme	Additional guidance
20	27	P1	for process to find sum of unknown probabilities, eg $1 - 0.3 - 0.1$ oe (= 0.6) **or** for process to find the total number of sweets in the box, eg $18 \div 0.3$ (= 60) **or** for process to find the number of red sweets, eg $0.1 \div 0.3 \times 18$ (= 6)	Award mark for any two probabilities given that sum to 0.6 eg given in the table
		P1	for process to find P(blue) = 0.15 oe **or** P(green) = 0.45 oe **or** for process to find the total number of green and blue sweets, eg "60" – 18 – "6" (= 36) **or** for process to derive an equation in x, eg $x + 3x = 1 - 0.3 - 0.1$ **or** $x + 3x =$ "0.6" **or** $x = 0.15$	Award P2 for P(blue) or P(green) (could be shown in table)
		P1	for a complete process to find the number of green sweets, eg "0.45" × "60" **or** $\frac{3}{4} \times$ "36" **or** $\frac{3 \times "0.15"}{0.3} \times 18$
