11 There are p counters in a bag.
12 of the counters are yellow.

Shafiq takes at random 30 counters from the bag.
5 of these 30 counters are yellow.

Work out an estimate for the value of p.

12 $T = \frac{q}{2} + 5$

Here is Spencer's method to make q the subject of the formula.

$2 \times T = q + 5$

$q = 2T - 5$

What mistake did Spencer make in the first line of his method?

.....

He multiplied q/2 by 2 but did not multiply 5 by 2.

.....

Correct: 2T = q + 10, hence q = 2T – 10.

1 mark
The 5 must also be doubled
