Original wording

for method to find value before increase eg $551 / 0.95$

Correction / interpretation

Read 'before increase' as 'before discount/decrease'. The normal price is $551 / 0.95 = 580$.

Reason

Question 8(a) specifies a 5% discount, so 551 is 95% of the normal price. The source calculation and answer are correct; only the word 'increase' is incorrect.
