

Paper: 1MA1/1H				
Question	Working	Answer	Mark	Notes
20		$x = -\frac{24}{5}$	M1	for substitution of a rearrangement of $y - 3x = 13$ e.g. $(3x + 13)^2 + x^2 = 25$
		$y = -\frac{7}{5}$	M1	(dep M1) for expansion of bracket after substitution (at least 3 terms correct out of the 4 terms) e.g. $9x^2 + 39x + 39x + 169$
		$x = -3,$	M1	for forming quadratic ready for solving e.g. $10x^2 + 78x + 144 (= 0)$
		$y = 4$	M1	for factorising e.g. $(5x + 24)(x + 3) (= 0)$ oe
			A1	$x = -\frac{24}{5}, y = -\frac{7}{5}$ and $x = -3, y = 4$ SC: B1 (if M0) for all 4 values mis-associated or one correct pair of values or values given as coordinates.
