

20 Dan has a grid of nine circles.

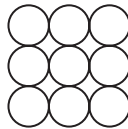

Dan chooses at random two of the circles in the grid.

(a) Show that the probability that Dan chooses the two circles shown shaded below is $\frac{1}{36}$

(2)

Joan also has a grid of nine circles.

Joan chooses at random three of the circles in the grid.

(b) Find the probability that these three circles are in a straight line.

(3)

(Total for Question 20 is 5 marks)
