26 The diagram shows a cube with edges of length x cm and a sphere of radius 3 cm.

The surface area of the cube is equal to the surface area of the sphere.

Show that $x = \sqrt{k\pi}$ where k is an integer.

Cube surface area = $6x^2$.

Sphere surface area = $4\pi(3^2) = 36\pi$.

Equate: $6x^2 = 36\pi \rightarrow x^2 = 6\pi$.

As $x > 0$, $x = \sqrt{(6\pi)}$, so $k = 6$.

4 marks total
$6x^2$
36π
Equate and divide
$x=\sqrt{(6\pi)}$, $k=6$

(Total for Question 26 is 4 marks)

27 Freddie measured the length of a pencil as 7.2 cm correct to 1 decimal place.

Complete the error interval for the length, p cm, of the pencil.

..... $\leqslant p <$ .....

(Total for Question 27 is 2 marks)
