20 (a) Simplify $c^5 \div c^2$

$c^5 \div c^2 = c^{5-2} = c^3$.

1 mark
c^3

(1)

(b) Simplify $(d^4)^3$

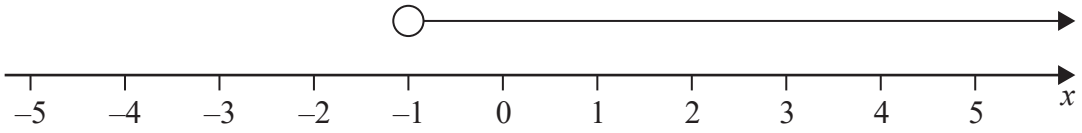

1 mark
d^{12}

Power of a power: $4 \times 3 = 12$, so $(d^4)^3 = d^{12}$.

(1)

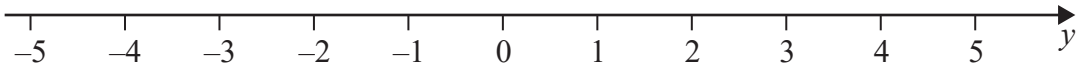

(Total for Question 20 is 2 marks)

21 (a) Write down the inequality shown on this number line.

(1)

(b) On the number line below, show the inequality $-3 \leqslant y < 4$

(2)

(Total for Question 21 is 3 marks)
