24 A water tank is empty.
Anil needs to fill the tank with 2400 litres of water.

Company **A** supplies water at a rate of 8 litres in 1 minute 40 seconds.
Company **B** supplies water at a rate of 2.2 gallons per minute.

1 gallon = 4.54 litres

Company **A** would take more time to fill the tank than Company **B** would take to fill the tank.

How much more time?
Give your answer in minutes correct to the nearest minute.

A: 1 min 40 s = 100 s = 5/3 min.

A: 2400/8 = 300 lots; time = 300 × 5/3 = 500 min.

B: 2.2 × 4.54 = 9.988 litres/min.

B: 2400/9.988 ≈ 240.288 min.

Difference ≈ 500 − 240.288 = 259.712 ≈ 260 min.

..... minutes

4 marks total
Convert rate units
A = 500 min
B ≈ 240 min
260 min

(Total for Question 24 is 4 marks)
