25 The first four terms of a Fibonacci sequence are

$a \qquad 2a \qquad 3a \qquad 5a$

The sum of the first five terms of this sequence is 228

Work out the value of a.

Fifth Fibonacci term = 3a + 5a = 8a.

Sum = a + 2a + 3a + 5a + 8a = 19a.

19a = 228, so a = 228 ÷ 19 = 12.

3 marks total
Fifth term 8a
Equation 19a=228
a=12

(Total for Question 25 is 3 marks)
