

20	(a)	57.1	P1	for a process to find time from Liverpool to Manchester, eg. $56 \div 70$ ($= 0.8$ (hrs) or 48 (mins))
	(b)	explanation	P1	for a process to find the total distance, eg $56 + 61$ ($= 117$) or the total time, eg “48” + 75 ($= 123$) or “0.8” + $\frac{75}{60}$ ($= 2.05$), with consistent units of time
			P1	(dep P2) for a correct process to find average speed with consistent units of time, eg. “117” $\div$ “2.05” or “117” $\div$ “123”
			A1	for answer in the range 57 to 57.1
			C1	for explaining that the time taken for the two parts of the journey must be the same or the distance from Leeds to York is $\frac{3}{4}$ the distance from Barnsley to York oe
