

| Paper: 1MA1/2H |                 |      |                                                                                                         |                                                        |
|----------------|-----------------|------|---------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| Question       | Answer          | Mark | Mark scheme                                                                                             | Additional guidance                                    |
| 16             | $3n^2 + 2n + 5$ | M1   | for a correct start to a method to find the $n$ th term, eg equal 2nd differences imply a term in $n^2$ | Need to see constant second difference found and $n^2$ |
|                |                 | M1   | for working with $3n^2$ , eg $3n^2$ and sequence 7, 9, 11, ...                                          | $3n^2 + 2n$ implies M2                                 |
|                |                 | A1   | for $3n^2 + 2n + 5$                                                                                     |                                                        |
