Original wording

The source B2 example describes a gradient-3 line through (0,-2) and (0.5,1).

Correction / interpretation

For y = 3x - 2, use points such as (0,-2) and (1,1), or (0.5,-0.5). The source partial-credit example (0.5,1) is a misprint: that point would give gradient 6 from (0,-2). The fully correct line and main mark scheme are unchanged.

Reason

Substitution into the printed equation checks the coordinates and gradient.
