

Question	Answer	Mark	Mark scheme	Additional guidance
6	Yes (supported)	P1	for start to a process to find a percentage increase, eg $87 - 76 (= 9)$ or $66 - 65 (= 1)$ or $\frac{85}{76} (= 1.118...)$ or $\frac{66}{65} (= 1.015...)$	Accept use of rounded and truncated figures for all marks
		P1	for process to find a % increase, eg $\frac{9}{76} \times 100 (= 11.84...)$ or $\frac{1}{65} \times 100 (= 1.53...)$ or $\frac{85}{76} \times 100 - 100 (= 11.(84...))$ oe or $\frac{66}{65} \times 100 - 100 (= 1.53...)$ oe	May work in decimals or equivalent proportions throughout
		P1	for processes to find both % increases, eg $\frac{9}{76} \times 100 (= 11.84...)$ and $\frac{1}{65} \times 100 (= 1.53...)$ or $\frac{85}{76} \times 100 - 100 (= 11.84...)$ oe and $\frac{66}{65} \times 100 - 100 (= 1.53...)$ oe	
		C1	for Yes supported by correct figures, eg $11(.842...) \div 1.5(38...) = 7.3$ to 8 or $11(.842...) \text{ and } 1.5(38...) \times 7 = 10(.766...)$ or $11(.842...) \div 7 = 1.57$ to 1.7 and $1.5(3...)$ or $0.11(842...) \text{ and } 0.10(766...)$	

Documented scheme clarification

Original source

scheme page 10, SHA256

9d7ee2fd705b607c70423ec1b7fedc4940917c4295e50bc0b3d3cb95cc1b1fa8

Original wording

eg 87-76 (=9) or 66-65 (=1)

Correction / interpretation

The first-class subtraction example should read 85-76 (=9).

Reason

The original example is transcribed using ASCII minus signs. The question gives a first-class price increase from 76p to 85p, and the subsequent scheme calculations use 85/76 and 9/76. Thus 85-76=9; the printed 87-76 equals 11. This clarification accompanies the preserved source row.
