

Question	Answer	Mark	Mark scheme	Additional guidance
15	$x = (\pm) \sqrt{\frac{3 + y}{1 - 2y}}$	M1 M1 M1 A1	for multiplying both sides by $2x^2 + 1$ eg $y(2x^2 + 1) = x^2 - 3$ or $2x^2y + y = x^2 - 3$ (dep M1) for a method to isolate terms in x in a correct equation eg $x^2 - 2x^2y = y + 3$ or $2x^2y - x^2 = -y - 3$ for $x^2 = \frac{3 + y}{1 - 2y}$ oe A1 for $x = (\pm) \sqrt{\frac{3 + y}{1 - 2y}}$ oe eg $x = (\pm) \sqrt{\frac{-y - 3}{2y - 1}}$	Condone missing brackets for this mark only
