

Question	Answer	Mark	Mark scheme	Additional guidance
21	No (supported)	P1 P1 C1	Process to find $\vec{XY}$ or $\vec{YZ}$ or $\vec{XZ}$ Process to find two of $\vec{XY}$, $\vec{YZ}$, $\vec{XZ}$ No, with explanation based on two fully correct vectors in simplified form eg $-5\mathbf{a} + 3\mathbf{b}$ is not a multiple of $-2\mathbf{a} + \mathbf{b}$ so YZ and XY are not	$\vec{XY} = -2\mathbf{a} + \mathbf{b}$ $\vec{YZ} = -5\mathbf{a} + 3\mathbf{b}$ $\vec{XZ} = -7\mathbf{a} + 4\mathbf{b}$
