

- General marking guidance

These notes offer general guidance, but the specific notes for examiners appertaining to individual questions take precedence.
- 1

All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.

Where some judgement is required, mark schemes will provide the principles by which marks will be awarded; exemplification/indicative content will not be exhaustive. When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, the response should be sent to review.
- 2

All the marks on the mark scheme are designed to be awarded; mark schemes should be applied positively. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme. If there is a wrong answer (or no answer) indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

Questions where working is not required:

In general, the correct answer should be given full marks.

Questions that specifically require working:

In general, candidates who do not show working on this type of question will get no marks – full details will be given in the mark scheme for each individual question.

3

Crossed out work

This should be marked **unless** the candidate has replaced it with an alternative response.

4

Choice of method

If there is a choice of methods shown, mark the method that leads to the answer given on the answer line.

If no answer appears on the answer line, mark both methods **then award the lower number of marks.**

5

Incorrect method

If it is clear from the working that the “correct” answer has been obtained from incorrect working, award 0 marks. Send the response to review for your Team Leader to check.

6

Follow through marks

Follow through marks which involve a single stage calculation can be awarded without working as you can check the answer, but if ambiguous do not award.

Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

12

Use of inverted commas

Some numbers in the mark scheme will appear inside inverted commas E.g. “12” × 50 ; the number in inverted commas cannot be any number – it must come from a correct method or process but the candidate may make an arithmetic error in their working.
- | | |
|------------|--|
| P | process mark awarded for a correct process as part of a problem solving question |
| A | accuracy mark (awarded after a correct method or process; if no method or process is seen then full marks for the question are implied but see individual mark schemes for more details) |
| cao | correct answer only |
- | Paper: 1MA1/2H | | | | |
|----------------|--------|------|---|--|
| Question | Answer | Mark | Mark scheme | Additional guidance |
| 10 | 35 | P1 | use of ratio 2:3 and tin quantities to find overall ratio of litres eg 4:3 or 4 tins : 3 tins or 20 litres (Y) & 30 litres (B) | Could be multiples 4 & 3 (for an amount which is a multiple of 50 litres).
“248” is the total cost for making 50 litres

“248” ÷ 5 = 49.6 for 10 litre (1 tin) green paint made
Profit on 10 litres is 66.96 – 49.60 = 17.36
Profit on 50 litres is 304.8 – 248 = 86.8
334.8 comes from 5 × 66.96 and is the selling price for 50 litres green paint |
| | | P1 | calculates total cost of making paint eg 4 × 26 + 3 × 48 (50 litres) or 104+144 (=248) | |
| | | A1 | calculates comparable cost eg 10 litres (1 tin) green paint made as 49.6 or differences (profit) for 1 tin as 17.36 or 5 tins as 86.8 or total comparable costs for 50 litres as 334.8 and 248, for 25 litres as 167.4 and 124 or 1 litres as 33.48 and 24.8 | |
| | | P1 | for percentage calculation eg $\frac{1736}{4960} \times 100$, $\frac{"334.8" - "248"}{"248"} \times 100$ | |
| | | A1 | cao | |
