17 In a shop, a TV has a normal price of £500
The shop has a sale.

On Monday, the normal price of the TV is reduced by $\frac{1}{10}$ to give the sale price.

On Tuesday, the sale price of the TV is reduced by 20%

Chris wants to buy the TV.
He has £400 to spend on the TV.

Does Chris have enough money to buy the TV on Tuesday?
You must show how you get your answer.

Monday reduction: 1/10 of £500 = £50.

Monday price = £500 – £50 = £450.

Tuesday reduction: 20% of £450 = £90.

Tuesday price = £450 – £90 = £360.

Yes. £400 – £360 = £40 left.

5 marks total
Find £50 discount
Find Monday £450
20% of £450 = £90
Find Tuesday £360
Yes; £40 left

(Total for Question 17 is 5 marks)
