12	(a)	1	B1	cao	
	(b)	$\frac{1}{7}$	M1	for showing a method using either reciprocal or square root eg $\frac{1}{\sqrt{49}}$ or 7 seen	
			A1	cao	Accept $\pm \frac{1}{7}$
	(c)	16	M1	for showing $\sqrt[3]{64}$ as 4 or 62^2 as 4096	
			A1	cao	

Documented scheme clarification

1MA1_MOCK_SET_04_1H_Q12

Original source

scheme page 9, SHA256 f8016e484b3c7b59a9809e68f0ec289c9d6b242200f08d2e7070d803583b44c7

Original wording

The scheme also accepts plus/minus1/7 in(b) and prints62 squared as4096 in(c).

Correction / interpretation

In (b), 49^(-1/2) has the principal positive value 1/7; the original scheme's broader acceptance of +/-1/7 is retained explicitly. In (c), the example giving 4096 should read 64 squared, not 62 squared. The final value 64^(2/3)=16 is correct.

Reason

A negative fractional power of a positive base is evaluated using the positive square root;64 squared=4096,62 squared=3844.
