21	300	P1 P1 P1 A1	process which recognises $AB = BC$ process to find length of tangent by using Pythagoras to find distance AB, eg $x^2 + 10^2 = 18^2 + (x - 6)^2 + 10^2$ oe **or** process to solve equation as far as $12x = 18^2 + 36$ (=360) shows a complete process to find the length of a tangent eg $x = 30$ **or** shows a process to find the area using their length of tangent eg $10 \times x$ cao	Could be indicated on the diagram.
