7	(a)	Bars shown	B2 (B1	for four accurate bars drawn for 2 or 3 accurate bars drawn)	Bars can be hand-drawn; heights should be closer to required heights than adjacent. Condone different widths if association with 4 & 5 is still clear.
	(b)	48	M1 A1	for 12 + 10 + 11 + 6 + 9 cao	Numbers may be written on the diagram but there must be an intention to sum
	(c)	Statement	C2 (C1	Two interpretations eg more children give a higher rating, for one interpretation)	3 more adults give “1” (than children) the same number give “2” 1 more child gives “3” (than adults) 8 less adults give “4” (than children) 1 more child gives “5” (than adults)

Documented scheme clarification

1MA1_MOCK_SET_04_2F_Q7

Original source

scheme page 6, SHA256 d2b92eff881a96be17ccaf9d4a0c07fb2cd23205d917981c3b19101d7543b6c2

Original wording

An additional comparison says 3 more adults give a score of 1.

Correction / interpretation

At score 1 the graph shows 12 adults and 6 children: 6 more adults, not 3. The other bar values and the adult total of 48 are unchanged.

Reason

The actual source bar heights, not the faulty extra example, establish the comparison.
