18	$-1\frac{1}{2} < x < 1$	M1	for a first step to solve the quadratic e.g. factorisation: $(2x+3)(x-1)$ **or** using the formula $\frac{-1\pm\sqrt{1^2-4\times2\times(-3)}}{2\times2}$	
		A1	for $-1\frac{1}{2}$ and 1	
	Sketch drawn	C2	Solution set drawn for $-1\frac{1}{2} < x < 1$	
		(C1	for a correct solution set drawn for two values (not the correct solutions) or an attempt to draw the correct solution set for $-1\frac{1}{2} < x < 1$ with some errors.	Any attempt must at least show a circle at two values, and some attempt to add lines.
