20 Work out the value of $\dfrac{3^7 \times 3^{-2}}{3^3}$

Same base: add powers when multiplying, subtract when dividing.

$\dfrac{3^7 \times 3^{-2}}{3^3} = 3^2 = 9$

1 mark
Exponent: 7 + (−2) − 3 = 2

1 mark
Evaluate the remaining power

9

(Total for Question 20 is 2 marks)

21 $v^2 = u^2 + 2as$

$u = 12 \quad a = -3 \quad s = 18$

(a) Work out a value of v.

(2)

(b) Make s the subject of $v^2 = u^2 + 2as$

(2)

(Total for Question 21 is 4 marks)
