27	(a)	$(m-3)(m+3)$	B1	for $(m-3)(m+3)$	Accept algebraic equivalents.
	(b)	$2x^2+x-15$	M1	shows 4 terms correct (disregard signs) or 3 terms with their signs correct	$2x^2 - 5x + 6x - 15$ NB take account of some simplification eg $2x + x - 15$ is 3 terms correct for M1
			A1	$2x^2+x-15$ oe	Any equivalent must be algebraically equivalent to the answer.
