6 The diagram shows a concrete block on horizontal ground.

$$p = \frac{F}{A}$$

p = pressure
F = force
A = area

The block is a cuboid, 12 cm by 12 cm by 65 cm.
The block exerts a force of 220 newtons on the ground.

Calculate the pressure that the block exerts on the ground.

Give your answer in newtons / cm^2

..... newtons / cm^2

(Total for Question 6 is 2 marks)
