

Paper: 1MA1/2H				
Question	Answer	Mark	Mark scheme	Additional guidance
18	$\left(\frac{-16}{5}, \frac{48}{5}\right)$	P1	for a method to find gradient of L_1 eg $\frac{6-2}{4-12} (= -\frac{1}{2})$ or states L_2 as $y = -3x$	Ignore sketches.
		P1	(dep on P1) for a method to find equation of L_1 eg subs into $y = -\frac{1}{2}x + c$ OR states L_1 as $y = -\frac{1}{2}x + 8$	
		P1	(dep on P2) complete method to equate both lines eg $-\frac{1}{2}x + 8 = -3x$	
		A1	oe	Accept equivalents eg $(-3.2, 9.6)$

2 All the marks on the mark scheme are designed to be awarded; mark schemes should be applied positively. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme. If there is a wrong answer (or no answer) indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

Questions where working is not required: In general, the correct answer should be given full marks.
Questions that specifically require working: In general, candidates who do not show working on this type of question will get no marks – full details will be given in the mark scheme for each individual question.

9 Linear equations
Unless indicated otherwise in the mark scheme, full marks can be gained if the solution alone is given on the answer line, or otherwise unambiguously identified in working (without contradiction elsewhere). Where the correct solution only is shown substituted, but not identified as the solution, the accuracy mark is lost but any method marks can be awarded (embedded answers).

12 Use of inverted commas
Some numbers in the mark scheme will appear inside inverted commas E.g. “12” × 50 ; the number in inverted commas cannot be any number – it must come from a correct method or process but the candidate may make an arithmetic error in their working.

Guidance on the use of abbreviations within this mark scheme	
P	process mark awarded for a correct process as part of a problem solving question
A	accuracy mark (awarded after a correct method or process; if no method or process is seen then full marks for the question are implied but see individual mark schemes for more details)
oe	or equivalent
dep	dependent (on a previous mark)
