

Paper: 1MA1/2H					
Question		Answer	Mark	Mark scheme	Additional guidance
1	(a)	$2 \times 2 \times 3 \times 7$	M1	for a complete method to find prime factors, could be shown on a factor tree, with no more than one arithmetic error or for 2, 2, 3, 7	Condone the use of 1
			A1	for $2 \times 2 \times 3 \times 7$ oe	Accept $2^2 \times 3 \times 7$
	(b)	420	M1	for at least 3 multiples of both 60 and 84 (can include 60 and 84) or finds the prime factors of both 84 (may be seen in (a)) and 60, may be seen in factor trees	60, 120, 180, 240, 300, 360, 420 84, 168, 252, 336, 420 $60 = 2 \times 2 \times 3 \times 5$ or $2^2 \times 3 \times 5$ If factor tree in (a) is incorrect ft this factor tree in part3 (b) for M1 only
			A1	420 or $2 \times 2 \times 3 \times 5 \times 7$ oe	

Documented scheme clarification

Original source

scheme page 6, SHA256 758ff38878f36ee68f16bf5691a6dd9c2bbb7ec412e2f074d89bf98c2657ce53

Original wording

If factor tree in (a) is incorrect ft this factor tree in part3 (b) for M1 only

Correction / interpretation

Read 'part3 (b)' as 'part (b)' of Question 1. Follow through the factor tree from part (a) for M1 in part (b) only. A1 still requires 420 or $2 * 2 * 3 * 5 * 7$.

Reason

This guidance appears in Question 1(b) and explicitly refers to an incorrect factor tree in part (a). Question 1 has only parts (a) and (b); the stray '3' does not identify another applicable part. The intended method-only follow-through is unambiguous.
