**20** Here are the first five terms of a sequence.

$$-1 \qquad 0 \qquad 3 \qquad 8 \qquad 15$$

Find an expression, in terms of $n$, for the $n$th term of this sequence.

.....

**(Total for Question 20 is 2 marks)**

**21** When a biased coin is thrown 4 times, the probability of getting 4 heads is $\frac{16}{81}$

Work out the probability of getting 4 tails when the coin is thrown 4 times.

$P(H)^4 = 16/81 = (2/3)^4.$

So $P(H) = 2/3$ and $P(T) = 1/3.$

$P(4 \text{ tails}) = (1/3)^4 = 1/81.$

**2 marks total**
One-tail probability
Four tails = 1/81

.....

**(Total for Question 21 is 2 marks)**
