Question	Answer	Mark	Mark scheme	Additional guidance
21	Proof	C1	draws diagram with OC and considers angles in an isosceles triangle (algebraic notation may be used, eg two angles labelled x)	Other methods are possible
		C1	finds sum of angles in triangle ABC, eg $x + x + y + y = 180$, or sum of angles at O, eg $180 – 2x + 180 – 2y$	
		C1	complete method leading to $ACB = 90$	
		C1	complete proof with all reasons given, eg base angles of an isosceles triangle are equal, angles in a triangle add up to 180º, angles on a straight line add up to 180º
