8	(a)		$\frac{1}{3}$	P1	for a process to find volume of cylinder, e.g. $\pi r^2 \times 6r$
				P1	for complete process, e.g. volume of 3 spheres divided by the volume of the cylinder, e.g. $(3 \times \frac{4}{3} \pi r^3) \div \pi r^2 \times 6r$ or $\frac{2}{3}$
				A1	$\frac{1}{3}$ oe
	(b)		Statement	C1	e.g. Proportion between number of spheres and relevant height cylinder remains constant
