17 A disc is placed on horizontal ground.

$$\text{pressure} = \frac{\text{force}}{\text{area}}$$

The disc exerts a force of F newtons over an area of A cm^2 where

$F = 576.2$ correct to 1 decimal place
$A = 72$ correct to 2 significant figures.

The disc exerts a pressure of P newtons/cm^2 on the ground.

By considering bounds, calculate the value of P to a suitable degree of accuracy.
You must show all your working and give a reason for your answer.
