Question	Answer	Mark	Mark scheme	Additional guidance
19 (a)	40	P1	uses area to find any frequency, eg. $\frac{9}{3}$ × 12 (= 36) or $\frac{13}{3}$ × 12 (= 52) or $\frac{12}{3}$ × 12 (= 48) or $\frac{4}{3}$ × 12 (= 16) oe **or** uses area to get total area = 41cm², bar 4 = 12 cm², bar 5 = 4 cm² **or** for 1 cm² = 4 babies	
		P1	(dep P1) for complete process, eg. $\frac{1}{2} \times$ "48" + "16" **or** ($\frac{\text{"12"} \div 2 + 4}{\text{"3"}}$) × 12 **or** (12 × $\frac{1}{2}$ + 4) × 4	
		A1	cao	
(b)	Explanation	C1	for explanation, eg the number of babies between 3.5 and 3.75 kg may not be equal to the number of babies between 3.75 and 4 kg or the numbers of babies may not be evenly spread throughout the interval 3.5 kg to 4 kg oe
