23 The Venn diagram gives some information about the number of people in a room.

$\mathscr{E}$ = {all people in the room}
C = {children}
G = {people wearing glasses}

Two children are picked at random from all the children in the room.

The probability that both children wear glasses is $\frac{2}{51}$

Work out the total number of people in the room.
You must show all your working.

.....

(Total for Question 23 is 5 marks)
