Question	Answer	Mark	Mark scheme	Additional guidance
24	Proof	M1	for diameter of $\mathbf{C_1}$ = $\sqrt{10^2+10^2}$ (= $\sqrt{200}$) oe or for radius of $\mathbf{C_1}$ = $\frac{1}{2}\sqrt{10^2+10^2}$ (= $\frac{1}{2}\sqrt{200}$) oe or for diameter of $\mathbf{C_2}$ = $\sqrt{(10-x)^2+(10+x)^2}$ oe or for radius of $\mathbf{C_2}$ = $\frac{1}{2}\sqrt{(10-x)^2+(10+x)^2}$ oe	
		M1	for expanding both brackets, eg $100-x-x+x^2$ and $100+x+x+x^2$ oe	
		M1	for expanding and simplifying expression, $\sqrt{200+2x^2}$ or $\frac{1}{2}\sqrt{200+2x^2}$	
		C1	for completing the proof, stating that $x^2 > 0$, so $200+2x^2 > 200$, leading to the result	May compare radii or diameters with link to required result
