Documented scheme clarification

1MA1_MOCK_SET_03_3F_Q10

Original source

scheme page 8, SHA256 74c8f7bd438e4ea6f63a49ca02fe8926e33cf7db0b10075a09c76cbe075d7efc

Original wording

The scheme alternative method includes 200 g, 8.10 and 41.10.

Correction / interpretation

The correct answer is GBP 4.14. In the source alternative method, multiplying the original quantities by 5 gives 2 kg of raspberries and 1.5 kg of strawberries, not 200 g of raspberries. Also 4.10 x 2 = 8.20 (not 8.10), and the final scaled total is 41.40 (not 41.10); divide 41.40 by 10. The main method gives 2.50 + 1.64 = 4.14.

Reason

All costs and quantities independently reconcile to the original question.
