5	(a)		Evaluation	C1	for error correctly identified, can be in the working, e.g. circling
	(b)		Assessment	C1	for statement that Josh should be looking for two values that add to −6 (not 6)
	(c)		Evaluation	C1	for indication that the *y* intercept should be negative not positive

Documented scheme clarification

1MA1_MOCK_SET_03_3H_Q5

Original source

scheme page 7, SHA256 7aa2e41b345577b3ec27c4f13bcc03c9fd284f3ea79baad14a4e26f52128b932

Original wording

The scheme says the y-intercept should be negative, not positive.

Correction / interpretation

In part (c), $y = 3x + 2$ has positive y-intercept +2. Shona has drawn a negative intercept, so the source scheme explanation reverses the signs. The correct criticism is that the line should cross the y-axis above the origin at +2.

Reason

Set $x = 0$ in the printed equation and compare with the original sketch.
