

17	35	P1	for angle $BCD = \text{angle } CDB = \text{angle } DBC = 60$	Condone omission of degree sign throughout Angles may be seen on diagram All reasons given must be linked to the appropriate working
		P1	for $(x =) 180 - 25 - 60 - 60 (= 35)$ OR $(x =) 60 - 25 (= 35)$ OR $180 - 60 (= 120)$ and $180 - "120" - 25 (= 35)$	
		C2	for $x = 35$ with fully correct reasons, eg. <u>angles</u> in an <u>equilateral triangle</u> are equal (60) and <u>angles</u> in a <u>triangle</u> add up to 180 OR <u>angles</u> in an <u>equilateral triangle</u> are equal (60) and the <u>exterior angle</u> of a triangle is <u>equal</u> to the sum of the <u>interior opposite angles</u> OR <u>angles</u> in an <u>equilateral triangle</u> are equal (60) and <u>angles</u> on a straight <u>line</u> add up to 180 and <u>angles</u> in a <u>triangle</u> add up to 180	
		(C1	for $x = 35$ with one correct relevant reason)
