

10	Yes (supported)	P1 for a start to processes, eg number of biscuits needed each week = $5 \times 7 (= 35)$ or number of days supply in each bag = $27 \div 5 (= 5.4 \text{ oe})$ or number of days in 4 weeks = $4 \times 7 (= 28)$ or the number of biscuits in 6 bags, eg $6 \times 27 (= 162)$ P1 for a complete process to find comparable values, eg number of biscuits, $5 \times 7 \times 4 (= 140)$ and $6 \times 27 (162)$ or number of bags, $5 \times 7 \times 4 \div 27 (= \frac{140}{27} \text{ oe})$ or number of days, $\frac{27 \times 6}{5} . (= \frac{162}{5} \text{ oe})$ and $4 \times 7 (= 28)$ C1 ‘Yes’ from a comparison of correct values, eg 140 and 162 or 5.1...(and 6) or 32.4 and 28	Numbers may be expressed as fractions or in a form using whole number with remainder. Correct figure(s) need to be accompanied by a statement confirming enough biscuits have been bought. Figures already given in working do not need to be repeated.
