

19	50	P1	for $180 - 110 (= 70)$ or states, or uses, exterior angle $+ x = 110$	Angles may be shown on the diagram. An angle labelled correctly as 70 and not contradicted scores this mark
		P1	for process to find the exterior or the interior angle of the hexagon, eg $360 \div 6 (= 60)$ or $180 - (360 \div 6) (= 120)$ or $((6 - 2) \times 180) \div 6 (= 120)$	Exterior = 120 or interior = 60 does not score the mark
		P1	for a complete process to find x , eg $180 - "70" - "60"$ or $"120" - "70"$ or $110 - "60"$	
		A1	cao	An answer of 50 with no supporting working scores 0
